

REAL WORLD BENEFITS OF TECHNOLOGY — IN THE — CLASSROOM

In the 2017 always-connected, mobile-centric school environment, keeping up with new technologies has become increasingly difficult.

Laptops and tablets are the most recognized tools, but there are many more to consider integrating in your program: cloud services, interactive whiteboards, videoconferencing, online media and study tools, 3D printing, and even virtual reality. And let's not forget the infrastructure that keeps it all running!

FACT:

The majority of public schools in the United States now provide at least one computer for every five students.

FACT:

60% of educators expect to use more technology in the classroom in 2007 than in the past school year.

FACT:

Biggest areas of budget expansion in 2016 were hardware, teaching training, software and tech support.

3 KEY QUESTIONS educators and administrators must ask to for successful implementation of technology in the classroom:

- 1 Do you need to upgrade any of your current technologies?**
- 2 Do you have the support to select and implement the necessary hardware and/or software?**
- 3 Can your current infrastructure support your upgraded and/or new technologies?**

**Not sure about the answers to these questions?
That's where we can help you!**
